

Department of Computer Science and Engineering

Bangladesh University of Engineering and Technology, Dhaka

Assignment 1: Reproducing Academic Papers

In this assignment, you will reproduce a recently published research paper. You are free to choose any recent paper from any top-tier Computer Science and Engineering (CSE) conference or journal spanning any subfield (e.g., published in 2025 or 2026).

Follow these steps to get started:

1. **Step 1:** Browse recent proceedings or volumes of reputable, top-tier CSE venues (such as ICSE, CVPR, NeurIPS, OSDI, SIGCOMM, VLDB, CHI, etc.).
2. **Step 2:** Skim through the titles and abstracts, and choose a paper that aligns with your technical interest or curiosity.
3. **Step 3:** Once you have selected a paper, download it, and enter its title, authors, and publication venue into the shared spreadsheet.
4. **Step 4:** Everyone must choose a **different** paper. Check the spreadsheet first to ensure your choice hasn't been taken, and use the "protect range" feature to secure your selection.

Note: If you face any issues downloading a paper, please inform Saem Hasan (saemhasan@cse.buet.ac.bd).

Reproduction Instructions

Now, enjoy reading the paper and start "reproducing it" following the guidelines listed below:

1. **Format:** Your reproduced paper will follow the ACM preprint single-column format. To ensure that, use the following command at the top of your document:
`\documentclass[manuscript,review]{acmart}`
2. **Header:** Copy the title, authors' information, and abstract exactly as they are in the original paper.
3. **Sections:** Your reproduced paper must include the following sections: *Introduction*, *Background/Related Work*, *Method*, *Findings/Results*, and *Discussion*.
4. **Summarization:** Please **do not copy** the text exactly as it is, word for word, without any changes. Instead, summarize the sections based on your understanding.
5. **Visuals:**
 - For **figures** in the main paper, taking screenshots and including them will suffice.
 - For **algorithms or tables**, you must recreate/reproduce them in your document.
6. **Citations:** Follow the ACM citation style.
7. **Length & Content Requirements:** Your reproduced paper must be at least **eight pages** in single-column format (excluding references). It must contain at least **seven references** and at least **one table, algorithm, figure, or flowchart**.

Important Deadlines

- **Submitting the assignment:** 13 July 2026, 11:59 PM

Submission Instructions

- Put your paper's PDF, your `.tex` file(s), and `.bib` file(s) in a folder named by your 7-digit student ID.
- Zip the folder and submit it to **Moodle**.

Although the primary goal is to ensure you learn how to format documents and write reports effectively using $\text{\LaTeX}$, we want you to get acquainted with the current, exciting research work happening across the CSE landscape. Hopefully, you will find an interesting problem space that you may want to explore further.

If that's the case, we are always happy to mentor you. :)
